1. Use Case 2 - *Exercise Tracker*

Test Case ID	TC01 - Add exercise
Test Objective	Verify that the system allows a user to add a new exercise successfully.
Preconditions	User is on the correct page for managing exercise
Test steps	1. Open the Exercise Tracker page. 2. Click "Add Set". 3. Enter the exercise name. 4. Enter the reps performed. 5. Enter the weight used. 6. Click "Save".
Input Values	String exercise_name = "Bench Press" Int reps = 8 Int weight = 135
Expected results	A new set appears in the list showing Bench Press with 8 reps and 135 weight.

Test Case ID	TC02 - Edit exercise
Test Objective	Verify that an existing exercise can be edited.
Preconditions	A valid exercise already exists.
Test steps	1. Open the Exercise Tracker page. 2. Select an existing set in the list. 3. Click Edit. 4. Change the reps value. 5. Change the weight value.

	6. Click Save.
Input Values	String exercise_name = "Incline Bicep Curl" Int reps = 6 Int weight = 40
Expected results	The set updates to show Incline Bicep Curl with 6reps and 40 weight. No duplicate entry is created.

Test Case ID	TC03 - Delete exercise
Test Objective	Verify that an existing exercise can be removed.
Preconditions	A valid exercise already exists in the system.
Test steps	1. Open the Exercise Tracker page. 2. Select an existing set from the list. 3. Click Delete. 4. Confirm the deletion if prompted.
Input Values	N/A
Expected results	The selected set is removed from the list. All other sets remain unchanged.

Test Case ID	TC04 - Invalid exercise
Test Objective	Verify that invalid inputs are rejected and errors are displayed.
Preconditions	User is on the correct page for adding a new exercise.
Test steps	1. Open the Exercise Tracker page. 2. Click Add Set. 3. Enter invalid or empty values. 4. Click Save.
Input Values	String exercise_name = "" Int reps = 0 Int weight = -20
Expected results	System prevents creation of the invalid item and displays a warning message describing the error.
